PROFESSIONAL SUMMARY

Final-year B.Tech Information Technology student and aspiring Software Developer / Full Stack Developer with hands-on experience building full-stack web applications using the MERN stack. Skilled in JavaScript, React.js, Node.js, Express.js, MongoDB, REST APIs, Git, and GitHub. Experienced in developing applications with authentication, authorization, role-based access control, CRUD operations, API integration, and responsive UI design.

EDUCATION

B.TECH IN INFORMATION TECHNOLOGY, 61%
BANNARI AMMAN INSTITUTE OF TECHNOLOGY

SKILLS

Programming Languages: Java, C, C++, JavaScript

Frontend Development: HTML, CSS, Bootstrap, React.js, Responsive Web Design

Backend Development: Node.js, Express.js

Database Management: MongoDB, MySQL, MongoDB Atlas

Web Development: MERN Stack, Full Stack Development, REST APIs, CRUD Operations

Authentication & Security: Authentication, Authorization, Role-Based Access Control

Tools & Version Control: Git, GitHub

UI/UX: UI Design, UX Design, Responsive Design

Development: Debugging, API Integration, Third-Party API Integration

Libraries & Technologies: Mongoose, Axios

Achievements

- Earned the AWS Educate – Introduction to Generative AI badge.
- Earned the AWS Educate – Machine Learning Foundations badge.
- Earned the Salesforce Trailhead – Innovator badge.
- Completed the Cisco Networking Academy – Cybersecurity (Basic) certification.

English
Intermediate

PROJECTS

STUDENT MANAGEMENT DASHBOARD – MERN STACK , *GitHub: Student Dashboard*

- Developed a MERN-based student management platform implementing role-based access control and full CRUD operations for student records.
- Designed and implemented a secure role-based access control system with separate interfaces for student registration and administrative tasks.
- Integrated key features to enhance functionality and user experience:
- Maintenance Mode: Allowed administrators to temporarily disable the front-end for system updates.
- Theme Toggle: Implemented a light/dark mode switcher for improved user accessibility.
- Full CRUD Operations: Engineered complete Create, Read, Update, and Delete functionalities for managing student records within the admin panel.

EAT EXPRESS – MERN STACK FOOD DELIVERY PLATFORM , *GitHub: Eat-Express*

- Developed a full-stack food delivery platform using the MERN stack (MongoDB, Express.js, React.js, Node.js) and CSS.
- Implemented a secure user authentication and authorization system for customer registration and login.
- Engineered the complete order lifecycle, from adding items to a cart, through a secure checkout process, to final order placement.
- Built a real-time order tracking feature that allows customers to monitor the status of their delivery from the kitchen to their doorstep.
- Leveraged MongoDB Atlas for a scalable, cloud-based database solution to reliably manage all application data

ONLINE COMPILER – MERN STACK CODE EXECUTION PLATFORM , *GitHub: Online Compiler*

- Developed a full-stack web application for real-time code compilation and execution using the MERN stack (MongoDB, Express.js, React.js, Node.js).
- Integrated a feature-rich code editor on the frontend, supporting syntax highlighting for multiple programming languages.
- Engineered a secure backend service that communicates with a third-party execution API (e.g., Judge0) via RESTful API calls to compile and run user-submitted code.
- Implemented a robust system to display execution output, including standard output and error messages, directly back to the user interface.
- Utilized MongoDB to persistently store user code snippets and execution history, enabling users to save, share, and manage their code.
